

Outsourcing Services

Our committed professionals aim to provide our customers with software solutions par excellence. Our vision is completely synchronized with that of our customers and we view projects from a first-hand perspective.

Implementation of solutions can be made available through three Engagement Models-**Professional Services, Application Development Services** and **IT Infrastructure Out-sourcing**. Choosing the right mode of engagement is perhaps the most critical of decisions and can result in the right mix of costs and yields.

Our transparency of operations and emphasis on clear communication ensures that every effort spent on a software development project is put to optimum use. Our average billing rates vary, governed by project duration, complexities, technologies and roles. This ensures that every project is uniquely treated and efficiently priced.

How can we really trust a third party with our company informations ?

The answer is not to hand over the responsibility for Information Resources to a third party;

You have to find a partner who can help you cope with variety and change at a sustainably reduced cost. While you guide the evolution of your Information Resources as an essential element of business strategy, you need a partner who can realize your Information Resources strategy. You need a partner who **Understands your business .**

Professional Services

Staff augmentation on client request is the primary objective for this service of ours. We have professional consultants under onsite/offshore models to help you execute projects under your supervision. Varied technical resources are deputed on daily/monthly billing rates contract. Mostly we provide skilled consultants onsite for this option.

Special features of this option are :

- All the projects are executed on Time & Materials Basis (T&M).
- Requirements are such that physical presence at the specified location is mandatory
- Requirements, features and specifications for the software being developed, are likely to evolve at any stage during project development.
- The anticipated duration of the project cannot be estimated (or if estimating a fixed duration for the project can lead to counter-productive results).
- You would like to work with us for a defined number of days starting from a minimum of 3 months contract.
- **"Rightsourcing"** of Consultants – **Right** person provided at the **Right** time for the **Right** Job

Application Development and Integration

Say goodbye to cost overruns and implementation delays by utilising JSG's Application Development Team. We cover everything from business advice through development to a fully commissioned operational system, delivered on time, to budget and competitively priced.

Our application specialists will craft a solution to deliver the requirements, reusing modules and current applications where possible ; to minimise bespoke application development, reducing project risks and costs, providing a fast return on investment

We develop and integrate customized applications with your current systems as part of a new solution or tailor existing applications to create greater productivity and enhance business benefits.

Speciality of these kind of Projects are :

- Fixed Duration Projects
- Requirements are not likely to change during the development process.
- Software implementation is governed by extremely tight budgetary and time constraints
